Product Count Analysis - Excel

README / Project Documentation

Project Overview

This project uses Microsoft Excel to count products across categories, identify the category with the highest product count, and present the results in a chart.

Objectives

- Count products by category.
- Identify the category with the largest product count.
- Practice COUNTIF and INDEX-MATCH formulas.
- Visualize category counts with a column or bar chart.

Tools and Formulas

Tool: Microsoft Excel
Count formula: =COUNTIF($C$3:$C$32,E2)
Top category formula: =INDEX(E2:E4,MATCH(MAX(F2:F4),F2:F4,0))

Key Findings

Technology: 10 products
Furniture: 9 products
Office Supplies: 11 products

Top Category: Office Supplies

Deliverables

- Product count table by category.
- Top category identification.
- Product Count by Category chart.

Conclusion

This beginner project demonstrates practical Excel data analysis skills, including category counting, formula use, and basic data visualization.
